

Q4. Does your institution have a promotion system in place that recognizes interdisciplinary research amongst science disciplines?

Our university's promotion system, following UGC/AICTE regulations, underscores our priority to promote interdisciplinary research, especially within science disciplines. As a reflection of our focus on promoting a diversity of scholarly activities, individuals who exhibit proficiency in interdisciplinary research and international collaborations are given particular consideration during the recruitment and career advancement assessment processes. Additionally, we prioritize these candidates for seed money grants and travel support, facilitating their engagement in conferences, workshops, and lab visits to excessively enrich their interdisciplinary collaborative ideas. We also offer Distinguished Young Faculty Award every year to the young generation among the faculty members, in recognition of their outstanding research achievements. This comprehensive approach highlights our dedication to nurturing and recognizing the pivotal role of interdisciplinary research in advancing scientific knowledge and innovation across academic boundaries.
